

Notice

We declare our purchasing direction not to utilize conflict minerals from the Democratic Republic of the Congo and adjoining countries by our official letter. Under the conditions of various handlers of the material from the mine, to distributors, traders, smelters, refiners, and shapers, full traceability is difficult. We have continued to make effort to clarify procurement route to ensure traceability of materials in accordance with our purchasing direction. Therefore Murata is continuing to investigate this area in order to gather evidence of non-use from our suppliers. As a result of the investigation, we have come to recognize part of the smelters. Please be advised the smelters and its country that are currently known from the information from our suppliers. Please refrain from disclosing the name of our suppliers as it is our confidential know-how. We will continue to clarify procurement route and continue to try our best to procure reliable materials. To that end we have cooperated with and completed the Electronic Industry Citizenship Coalition and the Global e-Sustainability Initiative (EICC/GeSI) Conflict Minerals Due Diligence investigation.

	Name of Smelter	Location of Smelter
